

Why choose Ideal Lawncare?

- Cheaper than doing it yourself - our bulk purchasing ensures lower costs to you
- Slow-release, non-scorch granular treatments ensure long-lasting results
- We use the same professional chemicals and equipment used by top sporting venues
- Better quality treatments than the do-it-yourself products on offer from the garden centre
- Free, no obligation survey and quotation
- We agree a programme of treatment with you - no long term contracts are required
- Hard Surface Weed Control (N.P.T.C. Accredited)
- Safe for children and pets
- Qualified, professional, licensed, police checked operators.

Mr Kent, Sutton Coldfield:

*"An amazing turnaround after just a couple of treatments.
No moss or weeds. Thanks"*

Mr Pennington, Walsall:

*"My lawn has never looked better,
I'm delighted with Ideal Lawncare"*

Dr Poole, Lichfield:

*"Fantastic results, great service
and one less job for me!"*

YOURSELF!**

OUR HISTORY

Ideal Lawncare has been caring for lawns in your area since 2005.

We can transform your lawn in next to no time, and you will start seeing the difference within days of our first treatment - guaranteed!

Act now. A healthy, green, moss-free and weed-free lawn is just a phone call away!

In addition, Ideal Lawncare's team of professionals can achieve all this for less cost than doing it yourself!

Our "all-year-round" care plan is listed in the panel below:

SPRING - Our Spring treatment comprises of a high quality lawn feed that provides early season nutrients to improve the lawn after winter, stimulate growth and enhance the lawn's colour.

EARLY SUMMER - This product is applied twice in the summer to ensure your lawn has all the nutrients it needs to stay healthy throughout the summer months.

LATE SUMMER - This contains controlled release granules that will help to maintain colour and growth in the lawn.

AUTUMN - This product does not encourage growth but strengthens the plant for the rigours of winter and encourages stronger root development.

WINTER - This treatment involves applying a liquid product to your lawn that targets moss and contains essential plant nutrients to harden the grass for winter.

AERATION - The process of mechanically removing cores of earth from the lawn to allow oxygen, nutrients and water to penetrate into the root zone, leading to a healthy and dense lawn.

SCARIFICATION - The process of removing excessive thatch from the lawn. Thatch forms a spongy layer which chokes the lawn and prevents the efficient take up of nutrients, air and water by the root zone. Scarification encourages more resilient grass growth and results in a much healthier lawn.
